About Our Speaker

Dr. Frederick Li graduated from the University of Manitoba College of Dentistry. Desiring to further his dental education and experience, Dr. Li moved to New York City and completed two years of dental residency in hospital facilities associated with Cornell Medical Center and Columbia University. Dr. Li is also a graduate of the Misch Implant Institute and was awarded a fellowship by the International Congress of Oral Implantologists and associate fellowship with the American Academy of Implant Dentistry.

He limits his practice to surgical and prosthetic dental implants in Vancouver. Along with mentoring a large surgical implant study club, Dr. Li gives a variety of implant prosthetic and surgical courses across Canada.

Social distancing rules will be followed. In-person attendees will be spaced appropriately with one dentist per table. There will be ventilation from open windows. Food and drink served in individual portions. This is an opportunity for safe in-person events to continue our growth in implant dentistry. If only interested in participating online, it is possible to provide you with hands on material to follow along at home (no change in tuition). Program dates and logistics may change depending on changes to provincial gathering regulations.

Frederick Li, DMD, FICOI

Summary

Dental implants have been successfully used for 35+ years and have now become the STANDARD OF CARE. With limited exposure to implant dentistry in dental schools, introducing and growing oral implantology into your practice is a challenge. The Surgical Implant Mentorship Program has been designed to offer practitioners personalized training for efficient and confident learning. You will be able to place and restore implants immediately after your training. The Surgical Implant Mentorship Program has a proven track record and is a unique opportunity combining lectures, model surgeries, and one-on-one mentor-assisted surgeries on your own patients.

Day 1: Introduction to Equipment

Intensive day of model surgery on anatomic models featuring simulated soft tissue, bone topography, and anatomic landmarks. Treatment planning for posterior single tooth replacement.

Day 2: Demonstration Surgery

Each attendee to bring x-rays and models of their case. Group case discussion and treatment planning. Short lecture on surgical stents and surgical logistics. Demonstration Surgery.

Day 3: Surgery Day

Course attendees to perform surgery on their own patients with assistance from the mentor. Review of surgeries.

Day 4: Doctor and Staff Training

Rationale behind dental implants. Doctor and staff training (sterilization/setup/marketing). Staff recommended to attend lecture in the morning, followed by more surgeries and a review of the course.
